

The Diamond Needle going like this

Now after the Sheet or page is printed and pressed from both sides, it should go in a Machine which everybody should get with a regular order of a Daily Newspaper. From One side put in, will be automatically set in and start talking (Playing). Comes out on other side turn around and put in other side. Should be replayable any time. Of this sheet could be pressed so much that it play One hour or less. That Daily Newspaper should be not more then 20 sheets together, so just detach each page and put in Player.

After the Company has the right Printing Press and the right Plastic Press the produce should be lower then by a Daily Newspaper. The Player Machine should be produce over a million so it will cost 5 Doll. each. Now the story which are pressed by the Record Press can give then to the listeners more convenience, like driving a car, also the ads. will be which Musik well you now like a real record or tape. The speaker should be loud enough that everybody in a normaly room can listen to it, also should be a knob to turn low and high.

I am hope this is understanding, I am just two years in Canada and not to good in the language. Also I want to have a Universia Patent.

This Statement is given to a few Companys which try to sell me Invention so I take the best offer which I will receive from all Companys together.
